Footprint Homes is proud to partner with Lewis Gray, who understand that a home is more than just a structure — it's where everyday life happens, and it deserves to be treated with care and consideration.

Separett®

Waterless toilet

Quiet, Fresh & Designed for Everyday Comfort. The Separett Villa 9010 sets a new benchmark for environmentally friendly toilets, delivering the look, feel, and comfort of a modern bathroom solution without the need for water. Its urine-diverting design separates liquids from solids, significantly reducing odour while also minimising the volume of waste that needs to be managed. A built-in two-speed fan quietly and efficiently extracts air, removing both odours and condensation from the toilet space. This upgraded system supports venting runs of up to 6 metres, including multiple bends, and can be ducted directly through an external wall for flexible installation.

Flexible Power Options for On- or Off-Grid Living Designed for flexibility, the Villa 9010 can run on either standard 230V mains power or a 12V solar/battery setup. The unit includes a mains power adaptor (300mA inverter), allowing it to plug into a standard outlet and convert power to 12V to operate the fan. Its low energy consumption makes it ideal for off-grid homes, cabins, and tiny houses. (Battery and cables not included). **High Capacity, Low Maintenance** Built to handle both occasional and full-time use, this system is equally suited to holiday homes or permanent living.

Separett Villa® 9010 – Composting Toilet

Thanks to its generous capacity, maintenance is minimal—a household of around five people typically only needs to empty the solid waste container every 4 to 6 weeks. To help reduce calcium build-up, pour lukewarm water down the toilet's urine bowl twice a week.

Reliable, Compact & Easy to Install With a footprint similar to a standard toilet, the Villa 9010 fits easily into most bathroom layouts without taking up extra space. It is designed for dependable, long-term use and performs consistently in both warm and cold environments. Installation is straightforward, with the unit supplied complete with a 75mm ventilation pipe for wall penetration and a 2-metre urine waste hose. It can be securely fixed to either the wall or floor, depending on your setup. Clean, Hygienic & User-Friendly Design Continuous ventilation keeps the space fresh at all times, while the clever internal design ensures waste remains out of sight. A built-in view screen conceals the solids container and only opens when seated, providing a clean and comfortable user experience.

Proven Value in New Zealand Conditions Widely recognised as one of New Zealand's best-value waterless toilets, the Separett Villa 9010 combines durability, performance, and ease of use, backed by a 5-year warranty for added peace of mind.

How it works

- Always sit down on the toilet
- When you sit down, the privacy flap turns away
- The toilet paper goes in the same container as the solid waste
- When you are finished, pour a cup of water into the urine bowl

Sit a little further back than usual so that urine and solid waste get separated.
Never throw burning or smoldering objects in the toilet!

Installation

This Toilet Meets the AS/NZS 1546.2.2008 Standards

- It's been independently assessed: The toilet has passed specific performance tests (not just manufacturer claims).
- It meets health & safety expectations: The standard ensures the system manages waste in a way that reduces risk to people and the environment.
- It's suitable for onsite wastewater systems: This is the key standard councils and regulators look for when approving composting or waterless toilets in NZ.
- It helps with council acceptance: While approval still depends on your local council, having this standard significantly strengthens your case for installation (especially for off-grid or rural builds).
- The 9010 model meets New Zealand standards and has been successfully installed across the country for many years. For properties with a high-water table, an ejector tank option is available. This can assist with council approval where drainage conditions may present challenges.

Separett Villa & Tiny Ejectortank 50

Eco-Friendly Urine Diversion & Fertiliser Solution

An ejector tank is available for sites with a high water table or challenging ground conditions, such as clay. This solution can help support council approval where drainage may otherwise be an issue. The Separett Ejectortank is a simple, water-powered solution for managing urine from waterless toilets. It automatically dilutes urine in a precise 8:1 water-to-urine ratio, making it safe to distribute directly to lawns, gardens, or flowerbeds as a natural fertiliser. Designed for easy setup with no moving parts, it connects to a standard ½" garden hose and uses household water pressure (min. 2.5 bar) to function. A 50L tank, built-in float indicator, and included 10m hose make it ideal for off-grid homes, holiday properties, or eco-conscious living.

How it works

- Automatically dilutes urine (8:1 water-to-urine ratio)
- Safe for use on plants, lawns, and gardens
- No moving parts – low maintenance
- 50L capacity – ideal for second homes or off-grid living
- Built-in float indicates when the tank is full
- Connects to ½" garden hose (water pressure ≥ 2.5 bar)
- Includes 10m ¾" drain hose with spray nozzle (extendable to 20m)
- Easy cleaning via reverse-flow self-clean function
- Not suitable for use in freezing temperatures
